Publication doctrine. This publication establishes durable requirements for its defined scope. Interpretation must preserve the permanent document identity, required evidence, controlled exceptions, source currency, and formal revision history.

EMERGING TECHNOLOGY AND ASSURANCE TOPOLOGY

Emerging and Advanced Technology

A trustworthy emerging technology, quantum, and robotics comparative evaluation companion program is a governed path from research claim through baseline, experiment, safety and security challenge, transition decision, bounded operation, and preserved evidence.

CLASSIFY

Separate established practice, candidate standard, reproduced result, vendor claim, implementation hypothesis, and open research.

EXPERIMENT

Declare baseline, configuration, uncertainty, scenario coverage, stop conditions, and independent reproduction before conclusions.

CONSTRAIN

Identity, policy, safety envelopes, physical boundaries, cryptographic authority, and human intervention limit consequence.

TRANSITION

Adoption, pilot, production, rollback, supplier exit, lifecycle, and retirement decisions remain evidence-bearing and reversible.

EVIDENCE - BOUND TRANSITION FLOW

No novelty claim becomes an operational claim without reproduced evidence and an explicit authority decision

INTERPRETATION AND ASSURANCE

How to apply this publication

Normative intent

Requirements define outcomes and constraints. Implementations may vary, but evidence must demonstrate equivalent control.

Evidence over assertion

Vendor documentation and design intent are not equivalent to reproduced behavior. Record evidence grade and uncertainty.

Risk-proportional depth

Higher consequence, autonomy, sensitivity, and irreversibility require stronger isolation, review, verification, and recovery.

Controlled exception

Exceptions require an owner, rationale, compensating control, residual-risk acceptance, expiration, and reevaluation trigger.

Normalized assessment scale

0	1	2	3	4	5
ABSENT	AD HOC	PARTIAL	OPERATIONAL	ADVANCED	LEADING

A numeric score must never hide a failed mandatory gate, missing evidence, untested workload, or unacceptable residual risk.

Comparison Doctrine

Product-neutral method for comparing advanced cryptography, photonics, neuromorphic systems, DePIN, next-generation

OPERATING POSITION

Compare equivalent outcomes, not feature lists, demos, publications, patents, token metrics, qubit counts, or roadmap claims.

- Use the same data, environment, safety boundary, resource accounting, and acceptance gates.

MYTHOS-EMERGING-CMP-0001 / EMERGING TECHNOLOGY

Evaluation Dimensions

OPERATING POSITION

Utility, uncertainty, performance, safety, security, privacy, physical limits, energy, facility, maturity, interoperability, skills, cost, support, portability, rollback, and exit.

MYTHOS-EMERGING-CMP-0001 / EMERGING TECHNOLOGY

Scenario Suite

OPERATING POSITION

Provider or specialized hardware loss.

- Calibration, environmental, or domain drift.
- Adversarial command, spoofing, or measurement manipulation.
- Safety stop, lost link, failed recovery, or correlated fleet failure.
- Protocol, cryptographic, standards, token-economy, or supplier change.
- Migration back to incumbent operation.

MYTHOS-EMERGING-CMP-0001 / EMERGING TECHNOLOGY

Scoring and Gates

OPERATING POSITION

Weighted scores apply only after mandatory reproducibility, safety, security, cryptographic, legal, rollback, and exit gates pass.

MYTHOS-EMERGING-CMP-0001 / EMERGING TECHNOLOGY

Decision Record

OPERATING POSITION

Document selected option, rejected alternatives, evidence grade, uncertainty, inherited responsibility, residual risk, transition cost, review date, and change triggers.
